

MindSet 24 (MS-24) & Mindset 16 (MS-1000) Customers,

With the introduction of Windows Vista and Hardware Standards moving away from SCSI support, you might have noticed that your equipment's compatibly days were numbered.

Good news for you, NeuroPulse-Systems acquired the MindSet product line in 2006 and has been working on a solution that addresses the compatibility concern.

August 25, 2008, NeuroPulse-Systems introduced a USB adapter that rejuvenates the longevity of your MindSet equipment. The USB Adapter will allow you to connect to Windows PC's running nearly any Windows version, including the latest version, Windows Vista.

Highlights of the NPS USB Adapter's benefits:

1. The original MindSet MindMeld, Calibration and Diagnostic software work great in Windows Vista using the USB Adapter.
2. No custom computer is needed to run an older operating system.
3. MACINTOSH computer compatible. *

*MAC lovers! The USB Adapter was recently used with a MAC notebook testing virtual PC programs: Boot Camp and VMware Fusion, emulating a Windows XP environment. Mindset's MindMeld software and NeuroGuide's new Mindset acquisition add-on functioned perfectly in the emulated XP environment. Now MAC users do not need to buy a PC to get things done...

They just need the NPS USB Adapter.

Contact NeuroPulse-Systems by Phone (970-867-2527), by E-mail (info@np-systems.com) or visit www.np-systems.com to find out more about the NPS USB Adapter.
